

RigManager provides improved drilling efficiency, HSE performance, and reduced downtime, with improved communication and coordination between operators, contractors and suppliers. As the following recorded results confirm:

- 50% Reduction in Planned Maintenance Time
- 30% Increase in Rig Availability
- 20% Reduction in Loss Time Incidents
- 20% Reduction in Offshore Administration Time

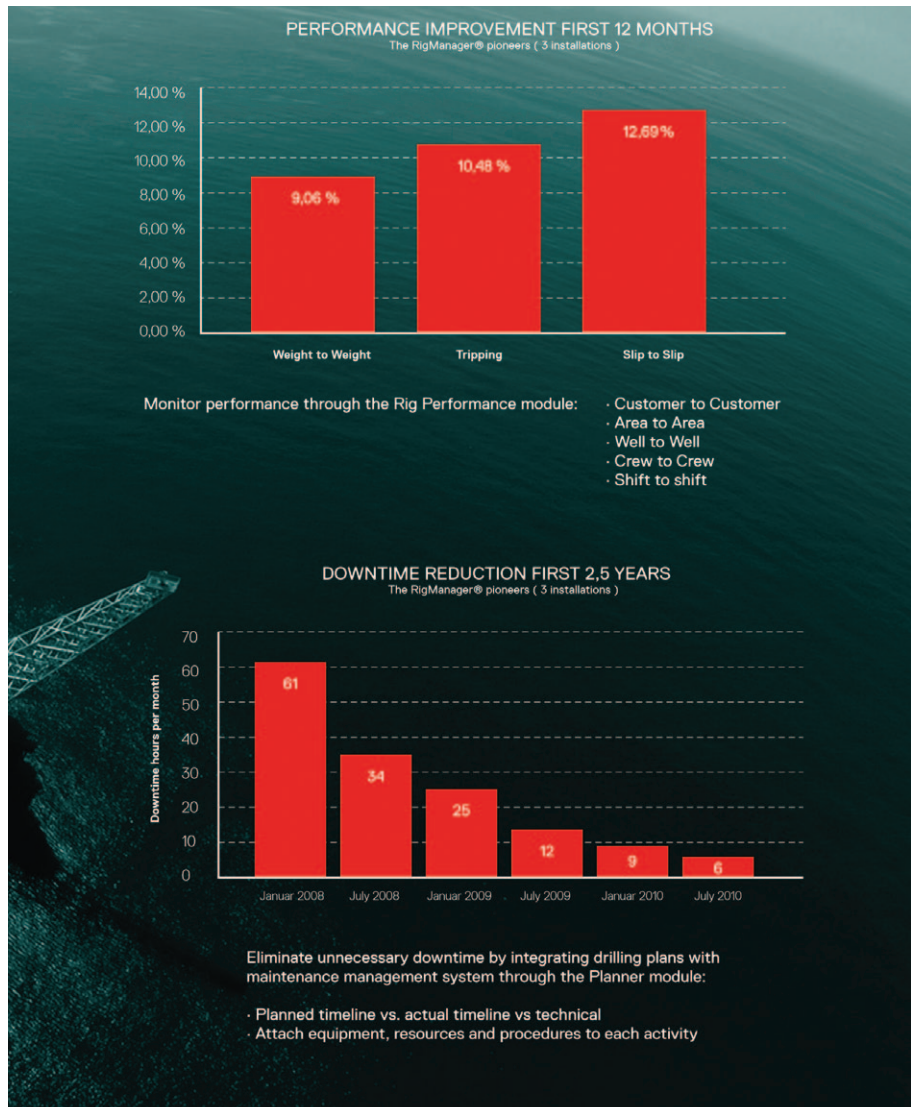

By bringing powerful software solutions and practical insight to the planning of drilling operations we are helping operators to implement safer, faster and higher quality operations.

RigManager clients have been overwhelmed with their realized benefits, including quick advancement to the top of operator efficiency rankings.

The Daily Operations and Rig Performance modules provide operators and contractors with a unique performance improvement feature.

By enabling direct comparisons between assets, wells, crews and shifts our clients can easily compare and target improvement efforts around operational specific sections such as tripping, slip to slip and weight to weight.

The Planner Module provides the client with opportunity to integrate the maintenance and well plans thus minimizing impact to operational time for maintenance and costly Non Productive Time.
