# TOWING WINCH DISPLAY

DECK MACHINERY - ANCHORING, MOORING & TOWING

## Towing winch performance display

A new easy to read display to have the most important information during the towing job, clearly available on the bridge.

The signals we are able to replicate from your original analogic indicators can be:

- Tension on the towing line (in tons).
- Length of the towing line (in meters).
- % of the pulling capability of the winch in the selected speed (0-100%).

Easy retrofit on most of the original plc logic control systems.

Dimmable 5" display gives the captain immediate access to important data during the towing, without distracting him from maneuvering.
