

Health, Safety, and Environmental (HSE) Policy

KONGSBERG

Kongsberg Maritime's goals are to have zero incidents, accidents, and to preserve the environment for future generations!

We will strive to achieve zero incidents and accidents that cause harm to people and environment.

We influence the health, safety, and environment through our products and business operations. We develop products and business services to help our clients work for a better environment and a sustainable society.

We require for all our employees and contractors to have safe physical and psychological working conditions, built on trust and respect.

We will contribute to a sustainable environment through reductions in transport, energy consumption, and waste.

We achieve this through:

Priority! We apply a risk-based approach when setting our priorities and the protection of Health, Safety, and Environment comes first.

Stop work! All our employees and contractors have stop work authority and a duty to initiate it when work conditions are unsafe.

Leadership! Our managers show HSE leadership by setting good examples, ensuring adequate competencies are obtained, and set clear and ambitious goals. We strive for a proactive HSE culture and pursue a competitive edge through smart and sustainable solutions.

Collaboration! We openly communicate HSE actions and results; we share best practices and continuously improve our management system.

Compliance! We act in accordance with relevant HSE legislations and standards where we operate and in the development of our products, solutions, and services.

Kongsberg, June 13th, 2017
