# DEFENCE COMMUNICATIONS CNA TRAINING

## COMMUNICATION SPECIALIST TRAINING

# Communication Network Administrator Course

The Communication Network Administrator (CNA) Course follows the Operator Training Course. It covers training in configuration, operation and operational fault-finding on system components and the communication system.

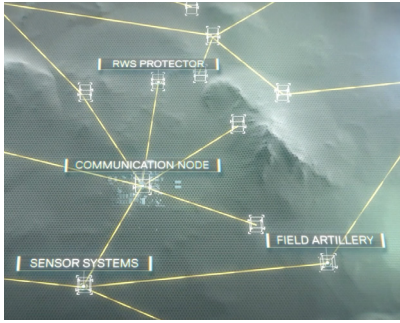

After completing this course, the students will possess knowledge about the design, architecture and functionality of the delivered system. The students will be able to perform and plan system operations and network management. With extended use of hands-on practical exercises the best possible training result will be achieved.

### Educational objectives

- The students shall be able to utilize the features and functionality of the system
- The students shall be able to configure the system and all system components in its system roles
- The students shall be able to troubleshoot and correct errors of the system

### WE OFFER

- High quality training
- Highly skilled instructors
- Customer tailored training solutions
- Instructor training
- A wide range of refreshment training options

### CNA Training educational level

The Communication Network Administrator Training Course is our specialist training and follows the Operator Training. Students attending the Communication Network Administrator Course, will after completed training be defined as specialists within preparation, set up and operation of the delivered communication system.

### Student audience CNA Training

The student audience for the Communication Network Administrator Course are communication network administrators and other personnel with overall technical communication responsibility as their primary task in their unit. Personnel attending have completed operator or maintenance training in advance. This precondition must be fulfilled in order to possess the knowledge needed in order to be able to follow the course progress.

The versatile Communication Management System simplifies the task of configuring your units with an intuitive graphical presentation

Large communication systems demand a robust and user friendly management. The role of the network administrator is crucial for mission success and equipment availability

## CNA TRAINING OVERVIEW

In-processing	Course start-up. Introduction of the instructors and trainees. Presentation of course plan and objectives
Product training	Provide an in-depth, physical and functional description of each communication product
System training	Provide a deeper understanding of the system operation. Hands-on practical exercises are used to enhance the students skills and knowledge
Theoretical and practical examination	Examination of all topics of the course
Summarizing and evaluation	Course feedback and summary
