Customer Testimonial – Spot Track

Zakher Marine International Inc. installed last year a Spottrack laser-based relative reference system from Kongsberg on the MV Sea Conquest.

During a special operation offshore Abu Dhabi where diving was one of the major tasks, a very large prism cluster (60 prisms) was installed on a platform for use towards the Spot Track on Sea Conquest as relative reference system. This was the only relative reference system in use during the operation.

The range from the platform to Sea Conquest was 2,571 meters during the operation, and SpotTrack performed during the whole operation without any interrupt or degradation, and was a vital asset during the operation.

Based on the proven performance and stability of the solution, Spot Track is the preferred laser-based relative positioning solution for Zakher Marine International Inc.

Yours Sincerely

For **Zakher Marine International Inc.**
