UNDERWATER POSITIONING – HAIN POST-PROCESSING SOFTWARE

**NavLab Post-Processing Computer**
- Installed with latest NavLab software
- Supplied with software licence dongle
- Used for post-processing of real-time subsea HAIN data.
- Improves quality of the logged real-time subsea HAIN position.

**IMPORTANT NOTES:**
The Doppler Velocity Log calibration is processed using the NavLab software. Without NavLab software available onboard the vessel, the system cannot be set up correctly as it will not be possible to do a correct Doppler Velocity Log calibration.

**NavLab:** software package can also be used to improve the real-time estimates of ROV position and attitude produced by the on-line subsea HAIN system. NavLab is a software system intended not only for navigation data post-processing, but also for navigation system research and development and navigation system accuracy analysis. It can therefore be used to analyse the on-line performance of the Subsea HAIN system and fine-tune its parameters, can also be used to assist in system fault finding.
