# THE MULTIMODE MULTIBEAM FOR MULTIPLE APPLICATIONS

- Imaging and profiling capabilities
- GeoTIFF output for image mosaics
- Multiple true-zoom windows
- CHIRP and Doppler modes of operations

The Kongsberg Mesotech M3 Sonar® is a multibeam system with both imaging and profiling capabilites. The M3 Sonar® provides high-resolution and easy to interpret images by combining the rapid refresh rate of a conventional multibeam sonar with image quality comparable to a single-beam sonar.

Detection of small objects out to 150 meters combined with a 120° to 140° field of view allows the operator to see the complete underwater picture in real-time.

### **APPLICATIONS**

- Marine Engineering
- · Shallow Water Bathymetric Surveying
- · Site Inspection
- · Environmental Monitoring
- · Site Clearance
- · Defense and Security

# **VDSL TELEMETRY**

- Alternative to Ethernet which is limited to <100m</li>
- Longer cable connection to sonar head (up to 1000m)

- · User-friendly interface
- Significant time savings
- Integrated tilt and pan/tilt control

# **INSTALLATION OPTIONS**

- · Pole mount on a surface vessel
- Suitable for a wide range of vehicles from large work-class-ROVs to small observation class ROVs
- · Tripod mounted

## M3 SOFTWARE

The M3 Software was developed specifically for the M3 Sonar® to manage communications with the head and operate all beam-forming and imaging processing.

## Four Pre-Defined Operating Modes:

- 1. Imaging: long range navigation with high speed update rate
- Enhanced Image Quality (eIQ): greatest image quality (0.95° angular resolution) from a short range with a slower update
- 3. ROV Navigation: selects eIQ or imaging based on range
- 4. Profiling: narrow 3° beam used to generate a 3D point cloud
